

G DECKTM

50 times lighter, 30% faster
to install than traditional
block & beam

Above and between the beam thermally efficient flooring
systems for the ground worker and house builder.

- Gdeck insulates above and between beams to create better thermal performance for a coursing height
- Gdeck is installed in one single layer with precise moulded parts which converts the T beam to a structural I beam
- Gdeck white rails make the beam location visible from above and are easily removed and replaced for NHBC drainage inspections
- Gdeck designs accurately calculate U values specific to each floor configuration at quotation and guarantee Sap assessment calculations
- Gdeck saves transporting, carrying and installing an average 7 tonnes of blocks per plot and still takes 3kN line loads
